George,

I can get you a national map showing state status of nutrient criteria adoption. Wisconsin, VA, FL, the list is quite large. Most have focused on TP, but not all. I'll email that to you tomorrow.

Tina

Hi Mike:

For some reason I was thinking you would be here on Friday.

I'm struggling with what to present on Monday and am really still shooting for little to nothing, and putting much of the ball in their court.

However, I do suspect based on various conversations this week, that they do want some "presentations" and I will really know more after my meeting tomorrow.

Anyway, I'm convinced they want some "examples". Examples of how this will all work and maybe use an actual large & small discharger to show those examples. So, I'm not sure how to put that together. I am planning on working with Jenny and Jeff (and hopefully Tina) on Friday, but thought you might be able to offer some advice via email while you are out.

Secondly, I plan to dispel some myths....one of them is still that Montana is the first in the nation....can we get some statistics on that? I don't mind showing that we are ahead of the curve on the implementation side of things, but we are not the only State developing or to have developed numeric nutrient criteria.
